

What is it worth, and who could pay for it?

One ticker in, a full sell-side valuation out. An automated Python pipeline runs six methods and writes an auditable Excel model and a pitchbook, in about a minute.

Six methods, one question each.

Every method is priced off the same data pull and lands on one football field.

METHOD	QUESTION IT ANSWERS	MECHANICS
Trading comps	Where do peers trade?	EV/EBITDA and P/E, 25th–75th percentile
Precedents & premiums	What did buyers pay for control?	Precedent EV/EBITDA, 20–40% premium
WACC	What return is required?	Peer beta relevered, synthetic rating
DCF	What are the cash flows worth?	5-year drivers, perpetuity and exit
LBO ability to pay	What can a sponsor afford?	Max price at 20% IRR, by bisection
Buyer screen	Who could pay?	Pro forma leverage, EPS accretion
